Subject: Harvey - Texas Poison Control Center Network - bullet

Per EPA R6 request:

ATSDR R6 activated the Texas Poison Control Center Network (6 call centers) to address chemical and toxic exposures questions generated from the public. Resulting in collaboration between multi State and federal environmental and health agency collaboration through a daily situation report produced and shared by the Poison Control Center. This report highlights a running total and a the cases received each day. The Poison Control Centers Network also provides direct patient care, providing free medical advice to those exposed to oil, gas, peroxides, benzene or other health concerns. A benefit for the impacted public and responders. 24/7 Nation Wide PCC phone: 1-800-222-1222.
